

xradar: A tool to work in weather radar data in xarray

THE OPEN RADAR TOOLS

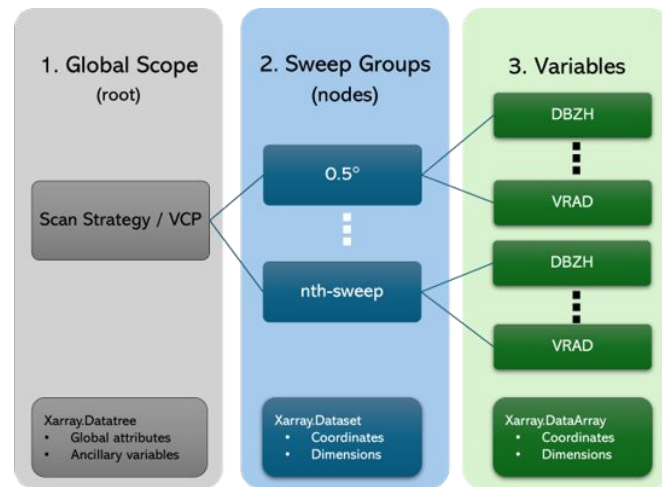

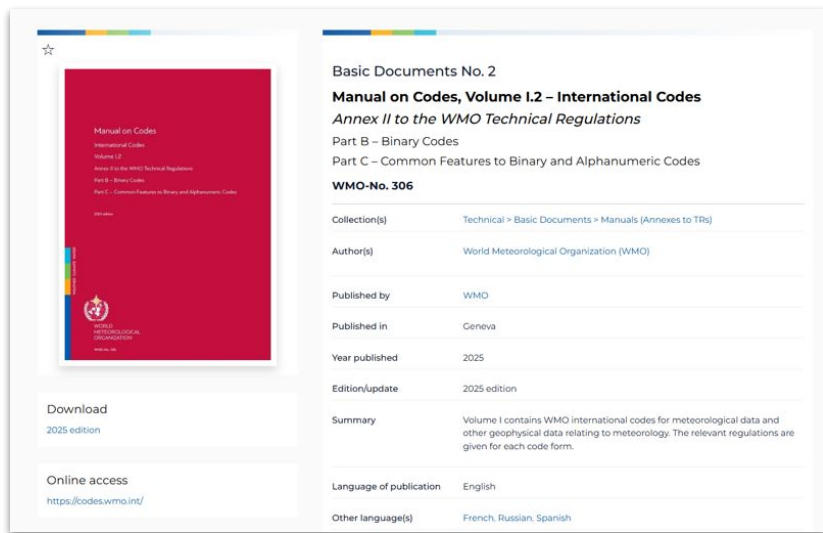

xradar is the common input/output (I/O) layer for the open-source weather radar ecosystem, enabling radar data to be read, standardized, and shared across radar tools.

Xradar: WMO radar data standard compliant

In 2025, the WMO introduced guidelines for weather radar data exchange. The FM 301 is designed for organizing, describing, and exchanging radial weather radar data in a structured, interoperable, and self-describing format.

- Radar metadata
- Standardized radar variables
- Self-describing and interoperable structure
