

The Lidar Radar Open Software Environment (LROSE)

- NSF-supported open-source software for lidar, radar, and profiler communities.
- 450+ separate C++ apps spanning the full data life cycle from data collection to usable products
- 6 key toolsets that define a core lidar/radar workflow: Convert, Display, QC, Grid, Echo, and Winds.

COLORADO STATE UNIVERSITY

The LROSE Gateway

- NSF-supported web platform for individual research, community workshops, and classroom learning.
- Cloud-based JupyterHub deployment eliminating software installation and data transfer hurdles.
- Interactive tutorial suites: LROSE Basics, QC, QPE, Radar Mosaics, Multi-Doppler Winds, Lidar Processing, Titan, ECCO etc.

6.4 Modify the SAMURAI parameter file

Now we will step through and edit the parameter file.

First, we'll start with the parameters associated with the input/output data directories and filenames.

Parameter	Line #	Description
data_directory	171	The input data directory. It can be a relative path, but an absolute path is more certain.
output_directory	181	The output directory where the analysis will go.

Task: set the data directories.

Change the data_directory and output_directory parameters to the following.

In the parameter file, change `data_directory = "/home/jovyan/lrose-hub/data/wind_guided/input"`

In the parameter file, change `output_directory = "/home/jovyan/lrose-hub/data/wind_guided/output_sam"`

Guided tutorials with tasks

LROSE Science Gateway

What's next for LROSE?

Continuously improving the User Experience!

- **LROSE-WAVEGUIDE (T.-Y. Cha's poster on Tuesday afternoon)**

- Improving Data Discovery
- Improving User Experience through Artificial Intelligence
- Developing Educational and Research Tools Using EOL Field Campaign Data

- **LROSE-core (B. Javornik's poster on Tuesday afternoon)**

- Improving Interoperability between software, data, and programming languages
- Developing benchmark datasets for software intercomparison.
- Supporting data-proximate workflows by integrating software with cloud-optimized data.
